Week of DevOps – Tuesdays

Richard Seroter
SENIOR DIRECTOR OF PRODUCT, PIVOTAL

@rseroter

Overview

Handling support tickets

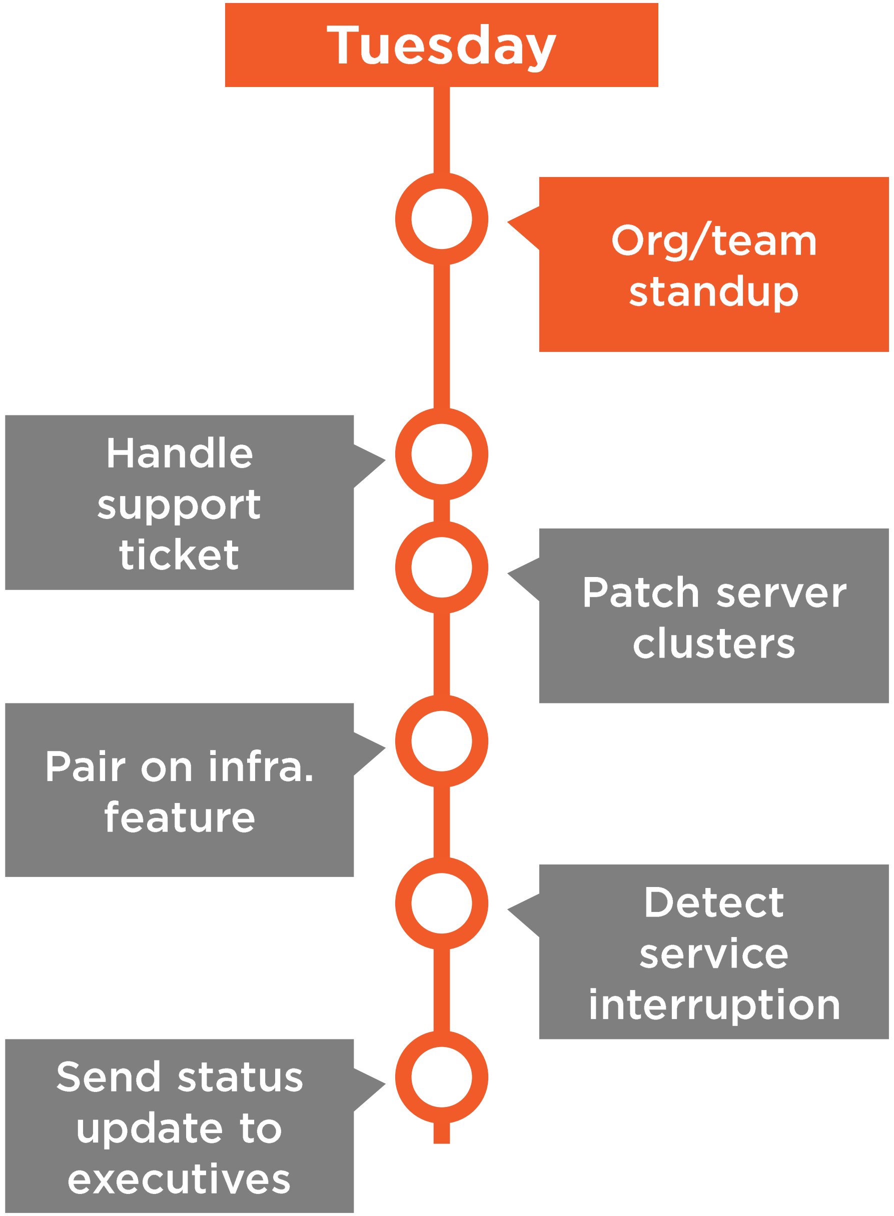
Patching infrastructure

Pairing on cross-functional features

Detecting and responding to outages

Communicating with stakeholders

Summary



What is it?

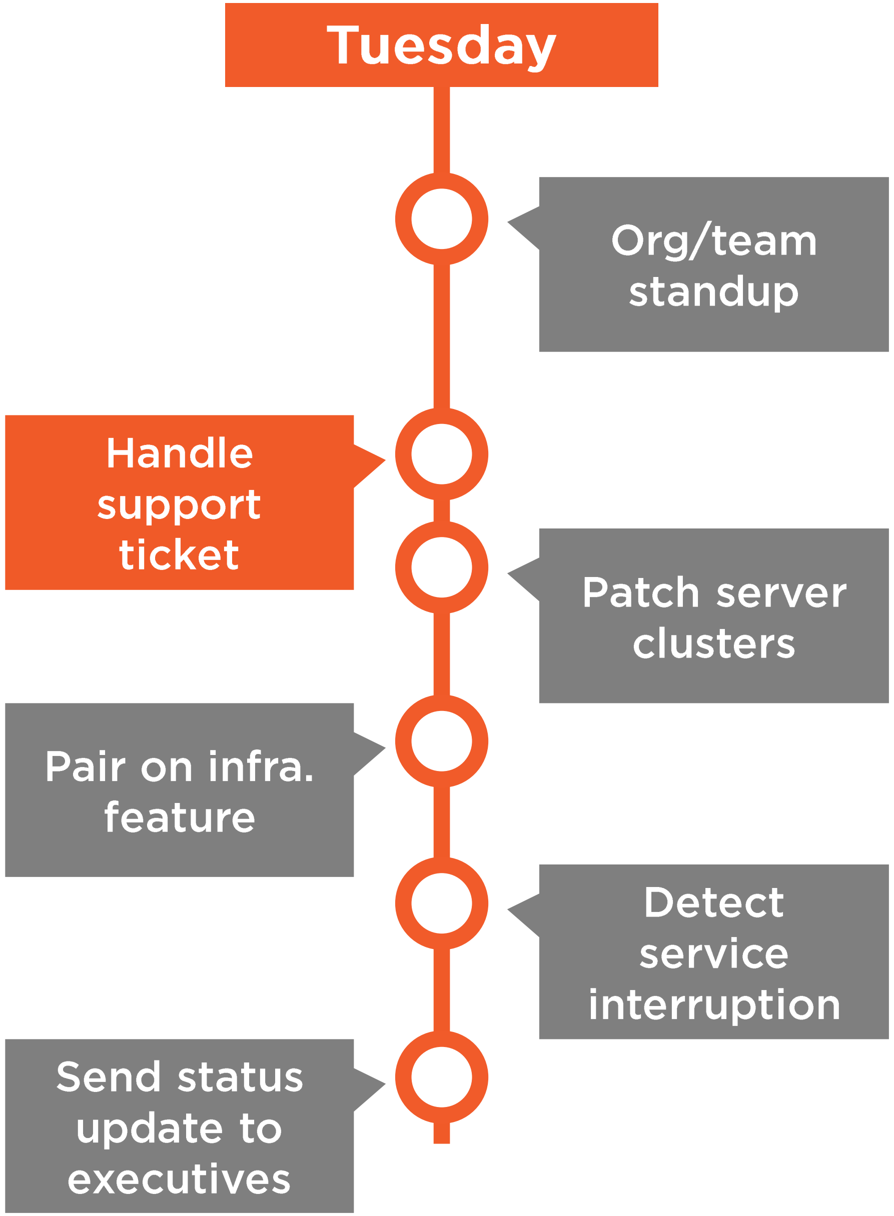
Org/team standup

Who is involved?

Team members, interested parties

Why does it belong in DevOps?

Transparency, throughput, delivery focus



What is it?

Handle support ticket

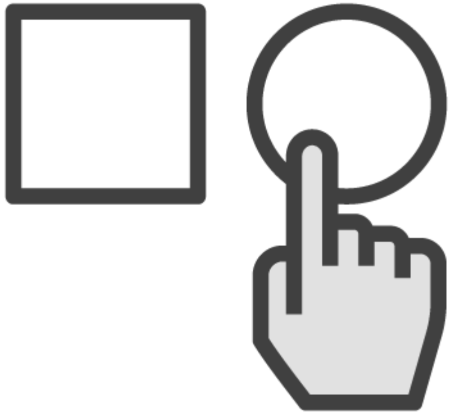
Who is involved?

On-call engineers, front-line support

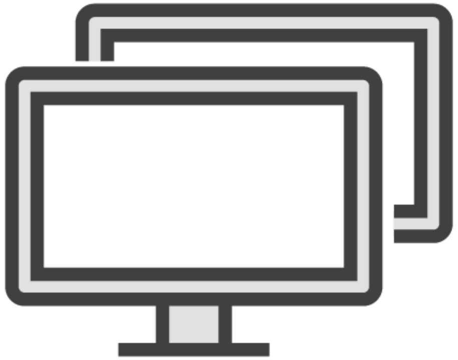
Why does it belong in DevOps?

Responsiveness, accountability

Team Closest to Code Handles Tickets

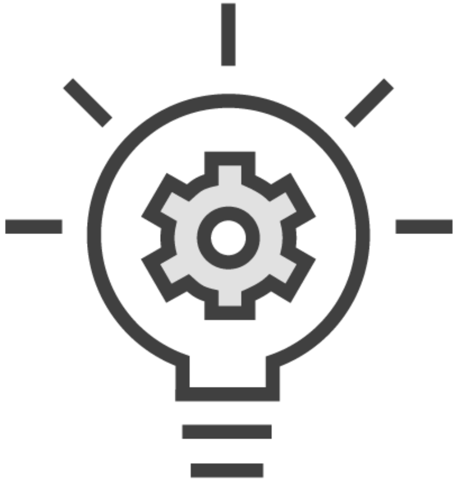


Primary responsibility of on-call engineer that week



Using same ticketing system as support personnel

May become a group effort to resolve



Sparks ideas for new features to propose

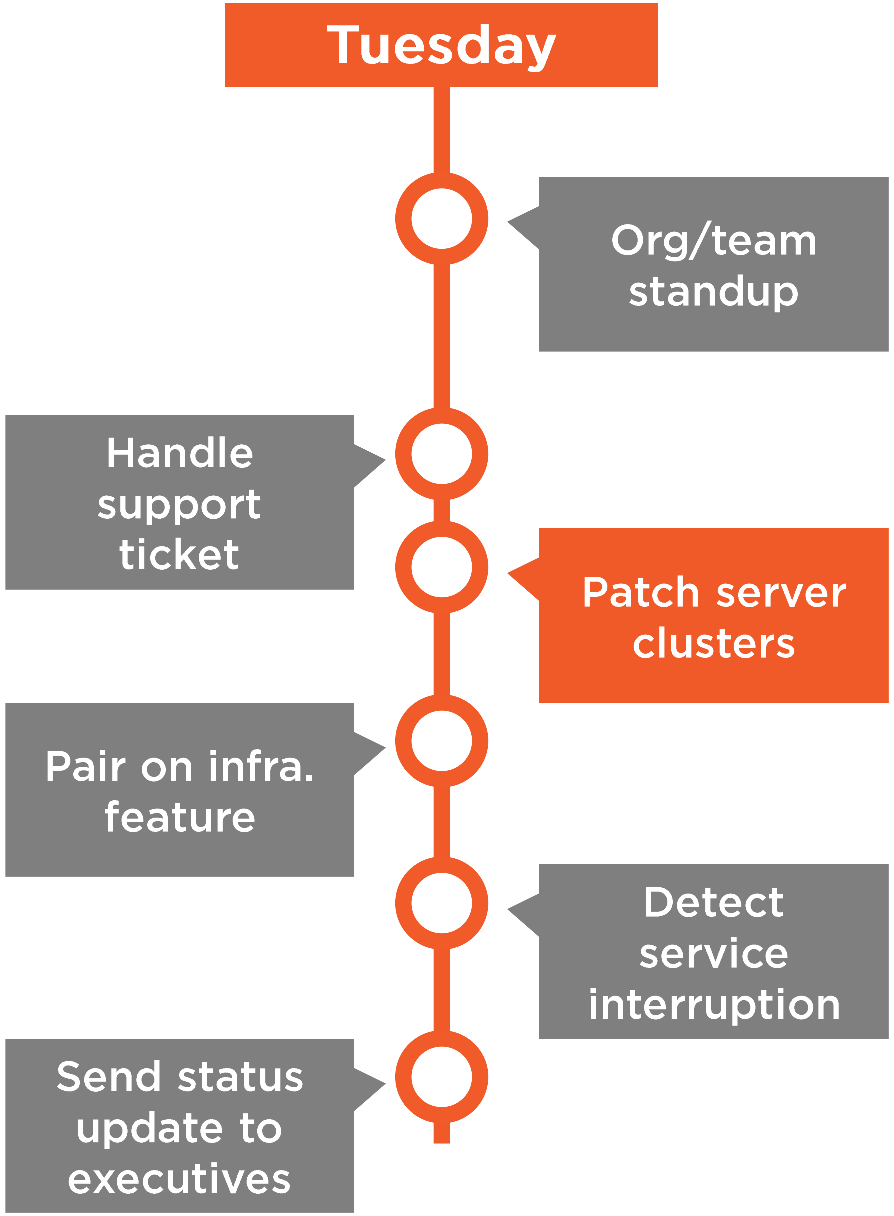
Tips for Getting Started

Consolidate unique ticketing systems

Don’t assign on-call engineer add’l work

Have test bed ready to reproduce issues

Avoid handing over tickets



What is it?

Patch server clusters

Who is involved?

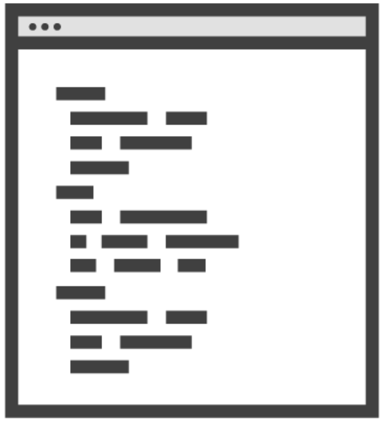
Engineers on the application team

Why does it belong in DevOps?

Consistency, responsiveness

Make Patching Routine, Uneventful

Upgrades required up and down stack



Infrastructure as code

Multiple approaches possible

Consistently applied to each environment

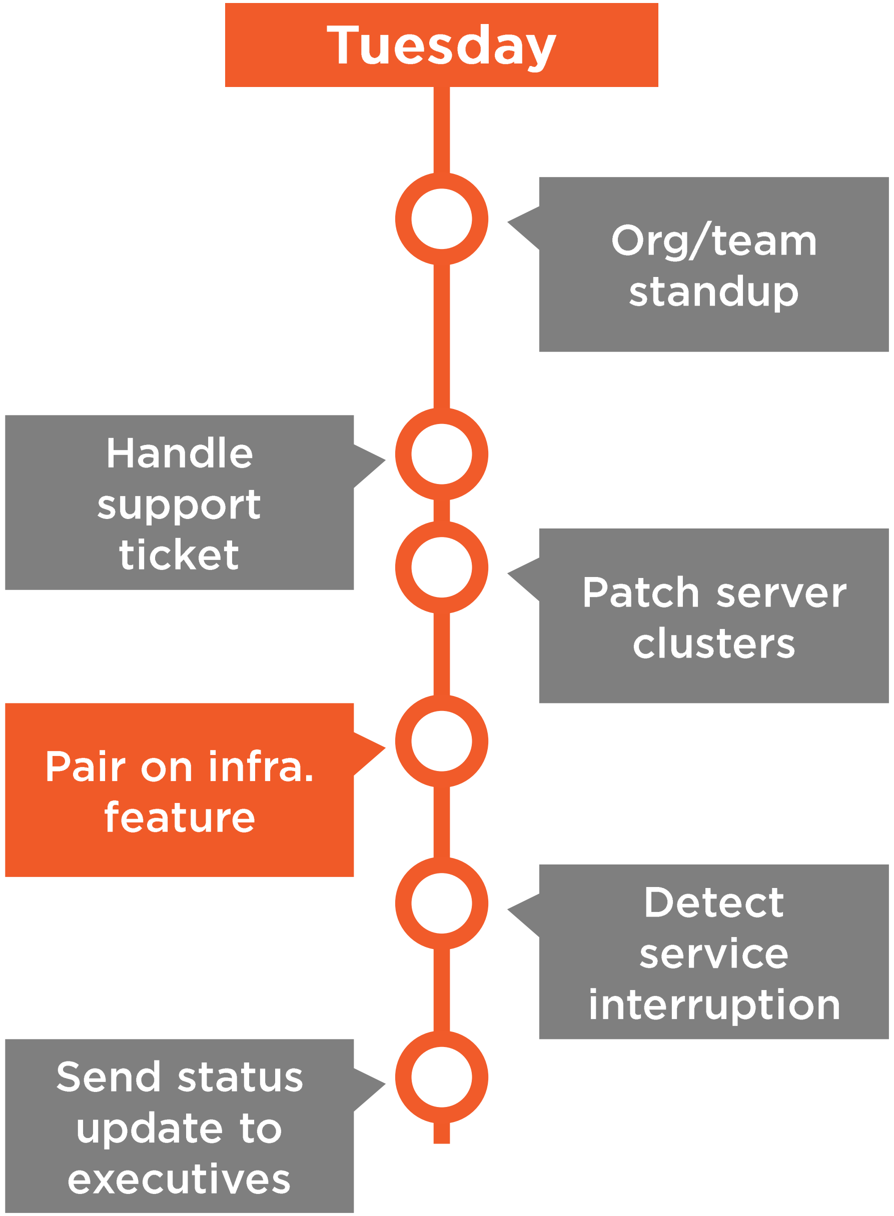
Tips for Getting Started

Do integration testing with infrastructure

Define a policy to never log into servers

Introduce config management everywhere

Aim for immutable infrastructure over time



What is it?

Pair on infrastructure feature

Who is involved?

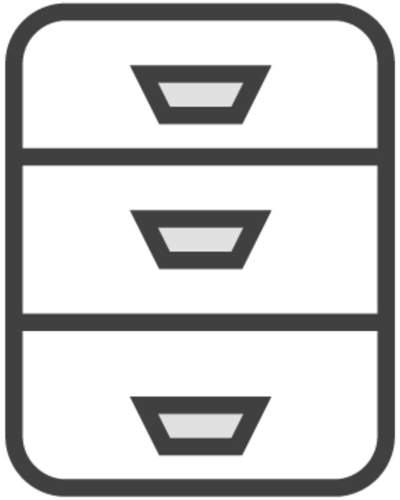
Engineers on the application team

Why does it belong in DevOps?

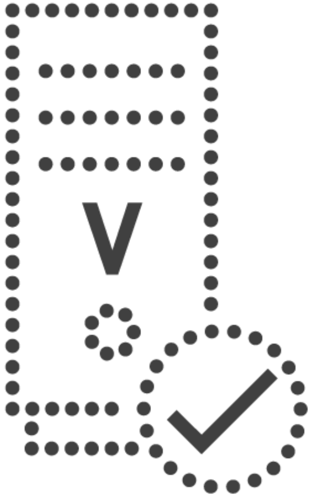
Cross-training, collaboration

Infrastructure Is Code Too!

Hire generalists with specialties



All configuration details in source control



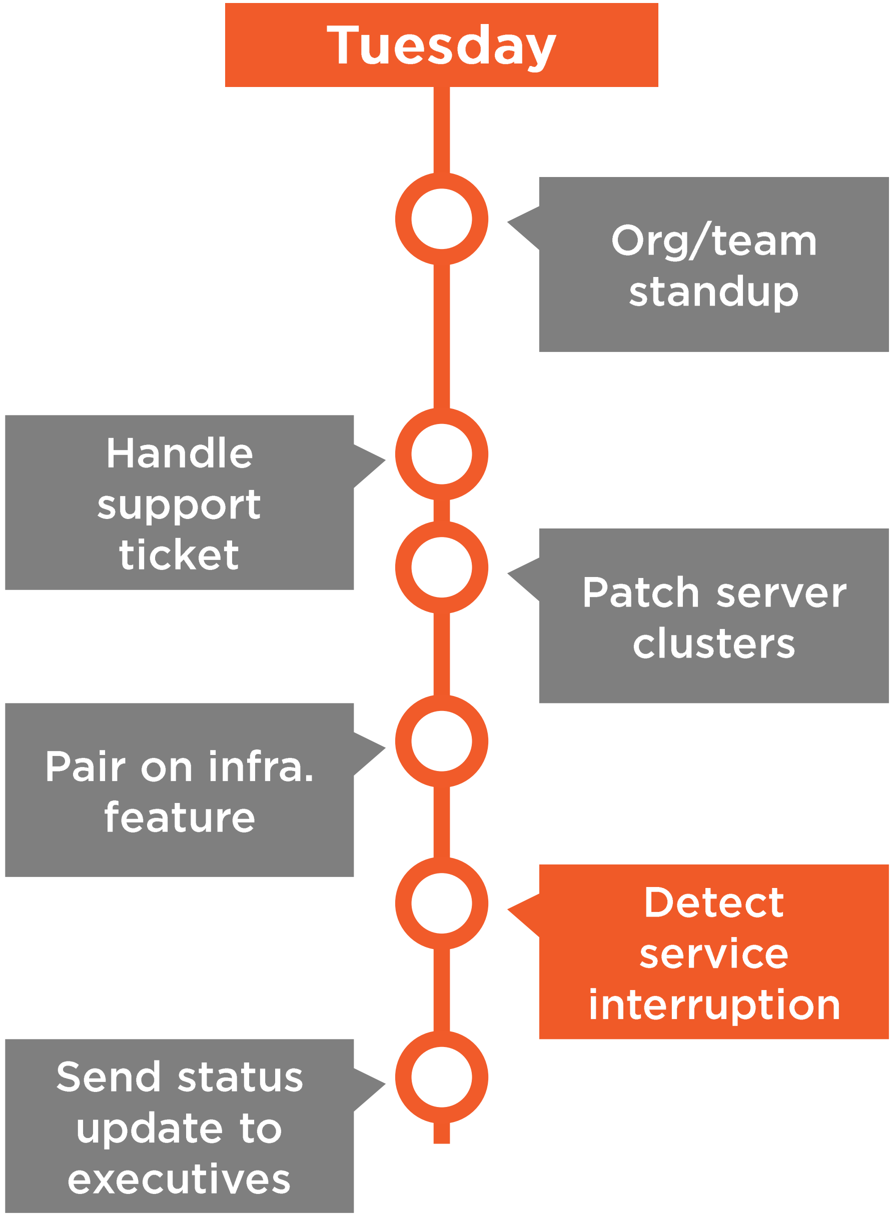
Test rigorously in production-like environment

Tips for Getting Started

Make infrastructure work visible

Pair Ops engineers with software engineers

Test infrastructure just like software



What is it?

Detect service interruption

Who is involved?

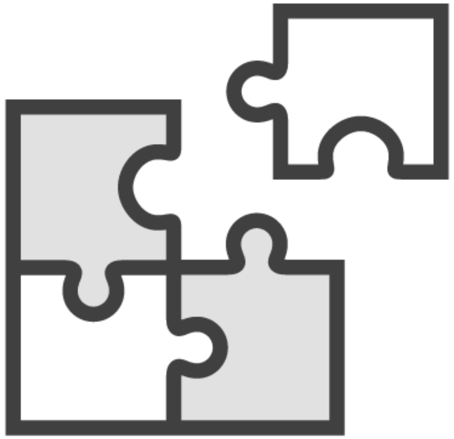
Support staff, on-call engineer

Why does it belong in DevOps?

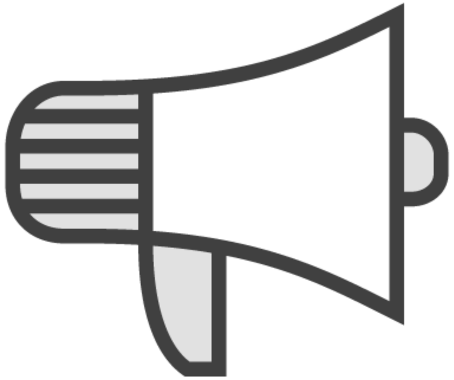
Responsiveness, accountability

Disciplined Approach to Problem Solving

Upfront instrumentation pays off



Use facts to figure out causation



Communication is key

Over-alerting causes fatigue

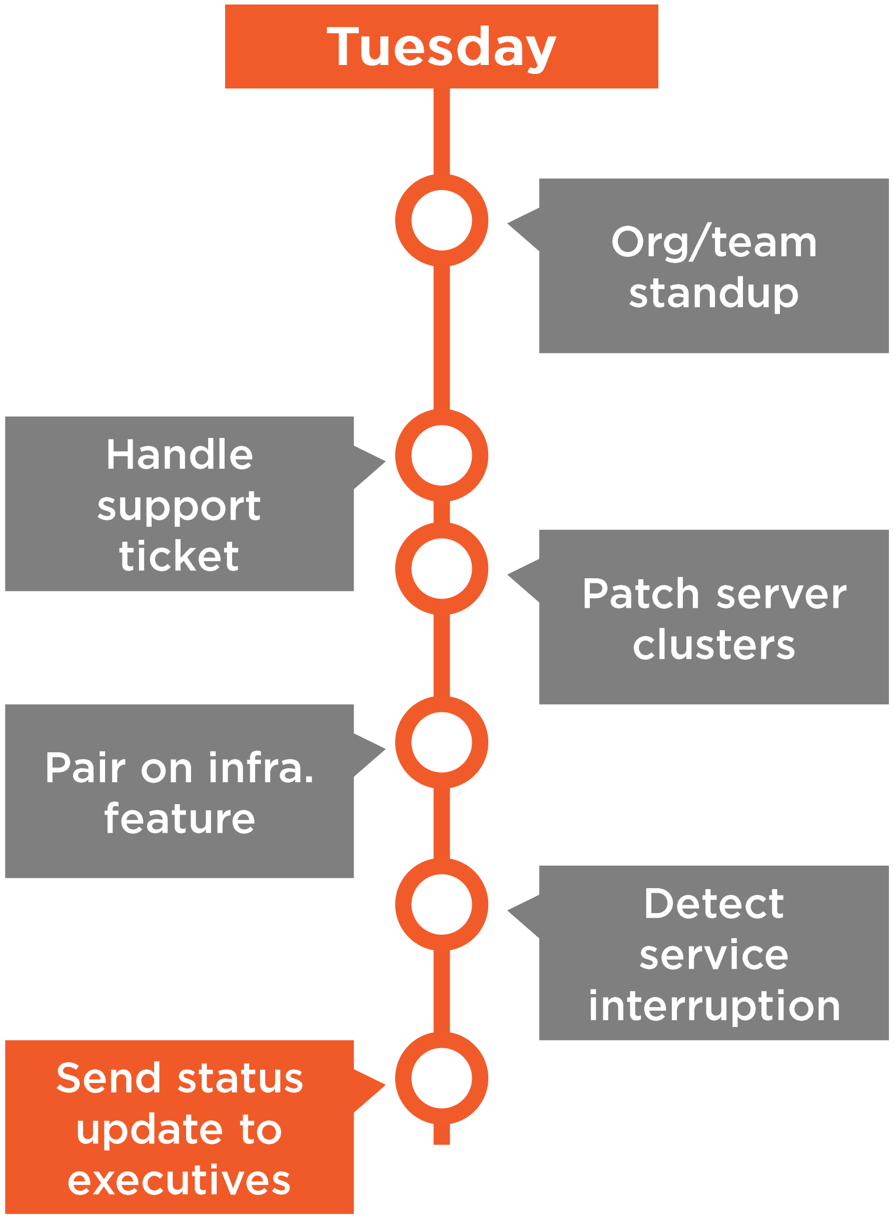
Tips for Getting Started

Identify core metrics that measure availability

Add tech for inside-out, outside-in tests

Make dashboards visible, proactive

Have unified way to communicate status



What is it?

Send status update to executives

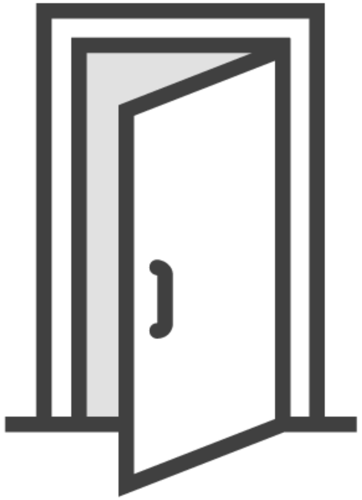
Who is involved?

Team leaders

Why does it belong in DevOps?

Transparency, trust

Communicate and Iterate



DevOps is a cultural change, and requires transparency

Share core *business* metrics

Build momentum through demonstrated progress

Tips for Getting Started

Choose handful of core metrics to share

Maintain regular rhythm

Show good AND bad news to build trust

Keep refining based on feedback
