

Week of DevOps – Thursdays

Richard Seroter

SENIOR DIRECTOR OF PRODUCT, PIVOTAL

@rseroter

Overview

Change team processes

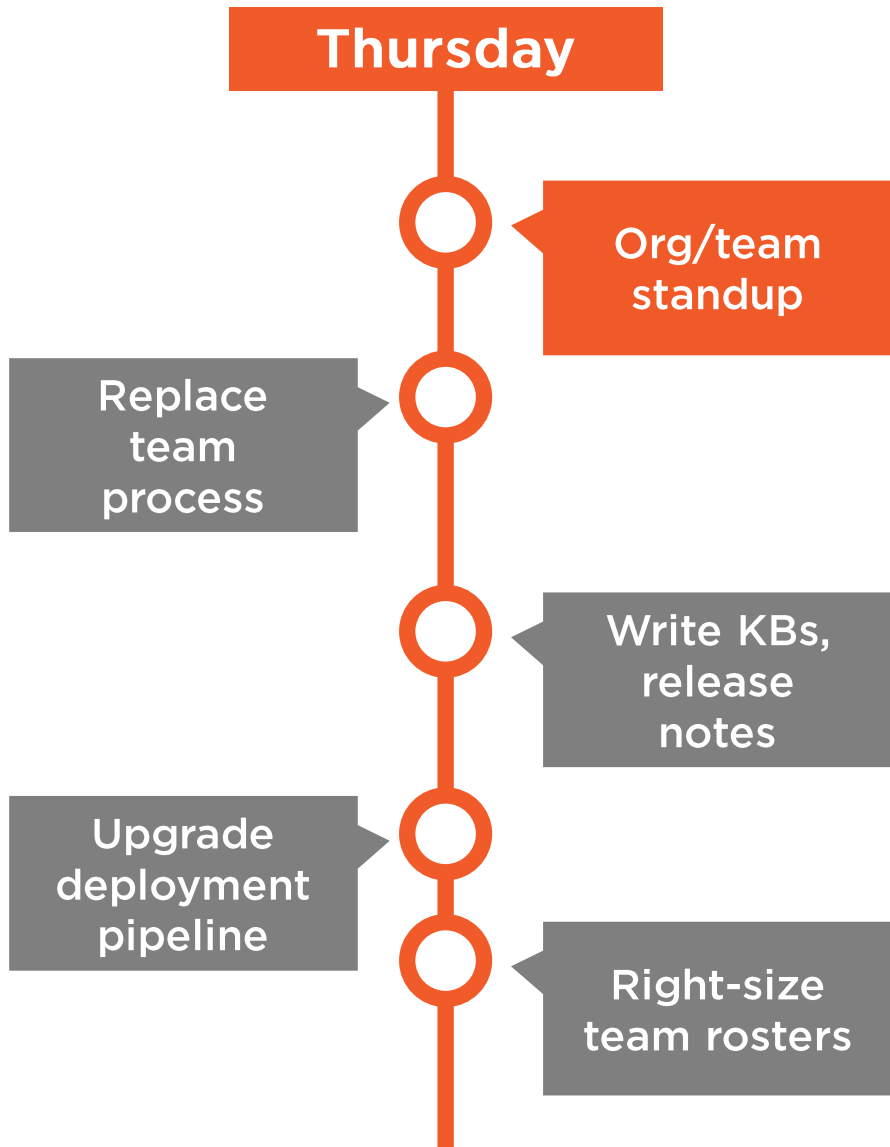

Create content about releases

Update the deployment pipeline

Right-size the engineering teams

Summary

What is it?

Org/team standup

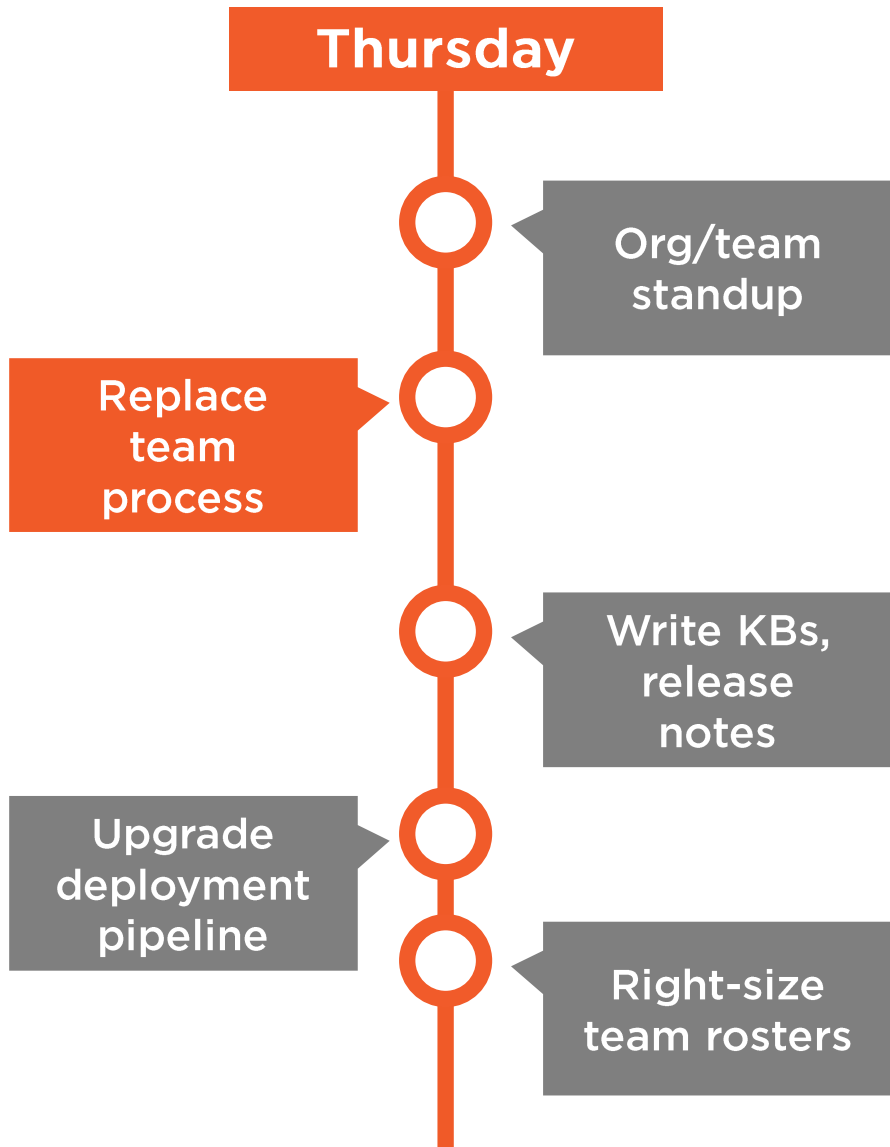

Who is involved?

Team members, interested parties

Why does it belong in DevOps?

Transparency, throughput, delivery focus

What is it?

Replace team process following retro

Who is involved?

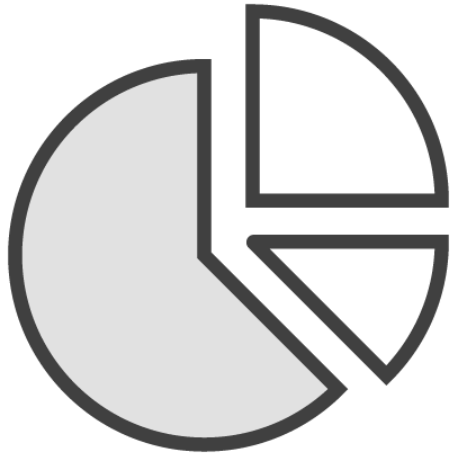

Team leaders

Why does it belong in DevOps?

Continual improvement

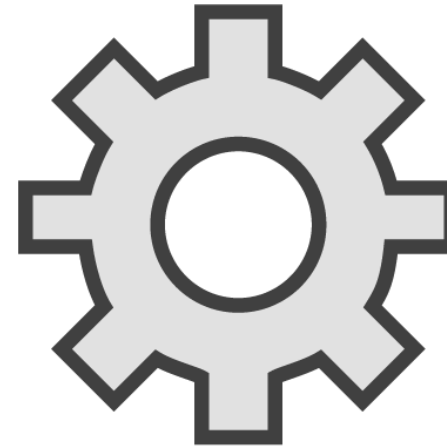

DevOps Is About Improving Flow

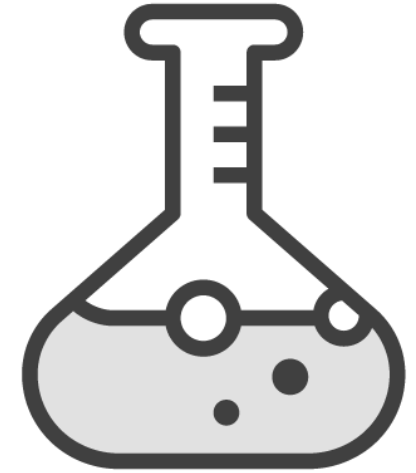

Hard to improve
what you're not
measuring

Act on broken
processes,
bottlenecks

Automation is
often, but not
always, the answer

Experiment and
measure

Tips for Getting Started

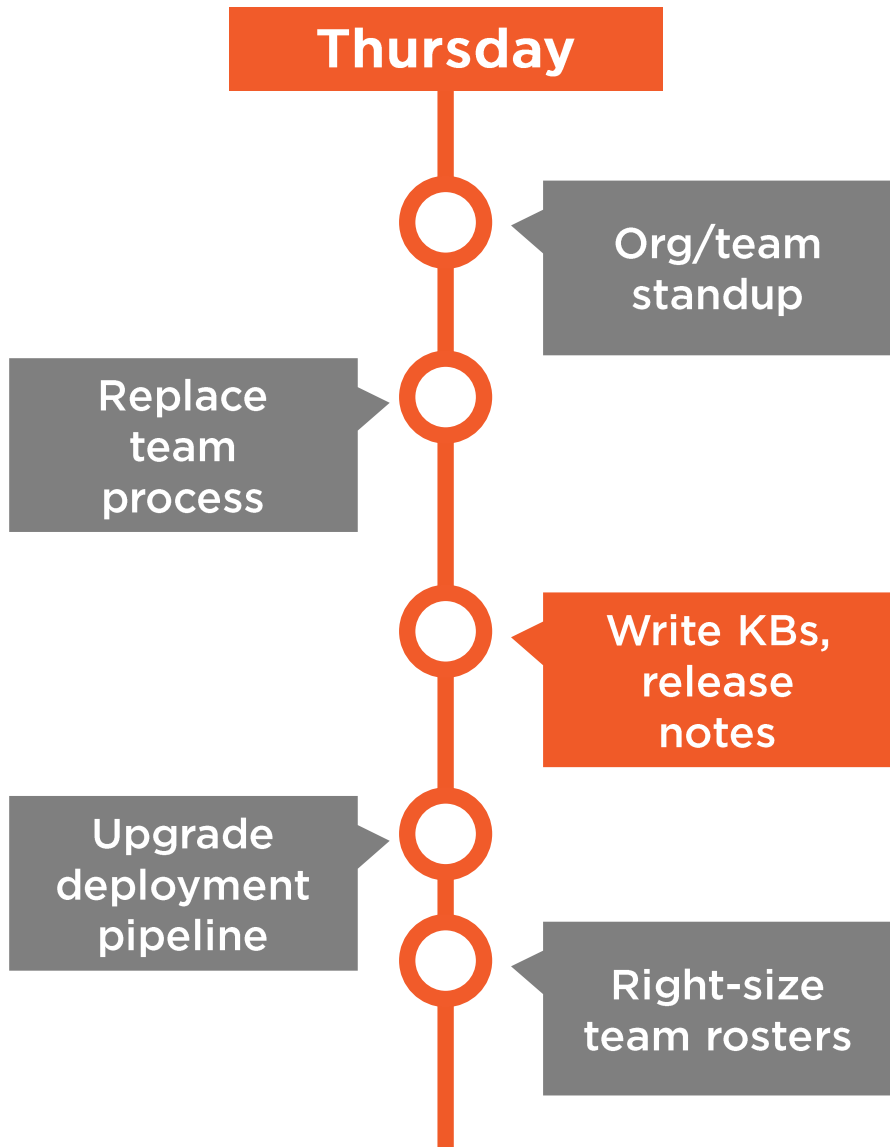

Solicit feedback from entire team

Listen to calls to stop at “good enough”

Only buy products/services with APIs

Evangelize to other teams

What is it?

Write knowledge base articles, release notes

Who is involved?

Application team, others in company

Why does it belong in DevOps?

Knowledge sharing, throughput

Faster Delivery Means More Frequent Explanations

As velocity increases,
harder for users to
track changes

Content must be
easy to create,
edit, and find

Change log and
broadcast engine are
important

Tips for Getting Started

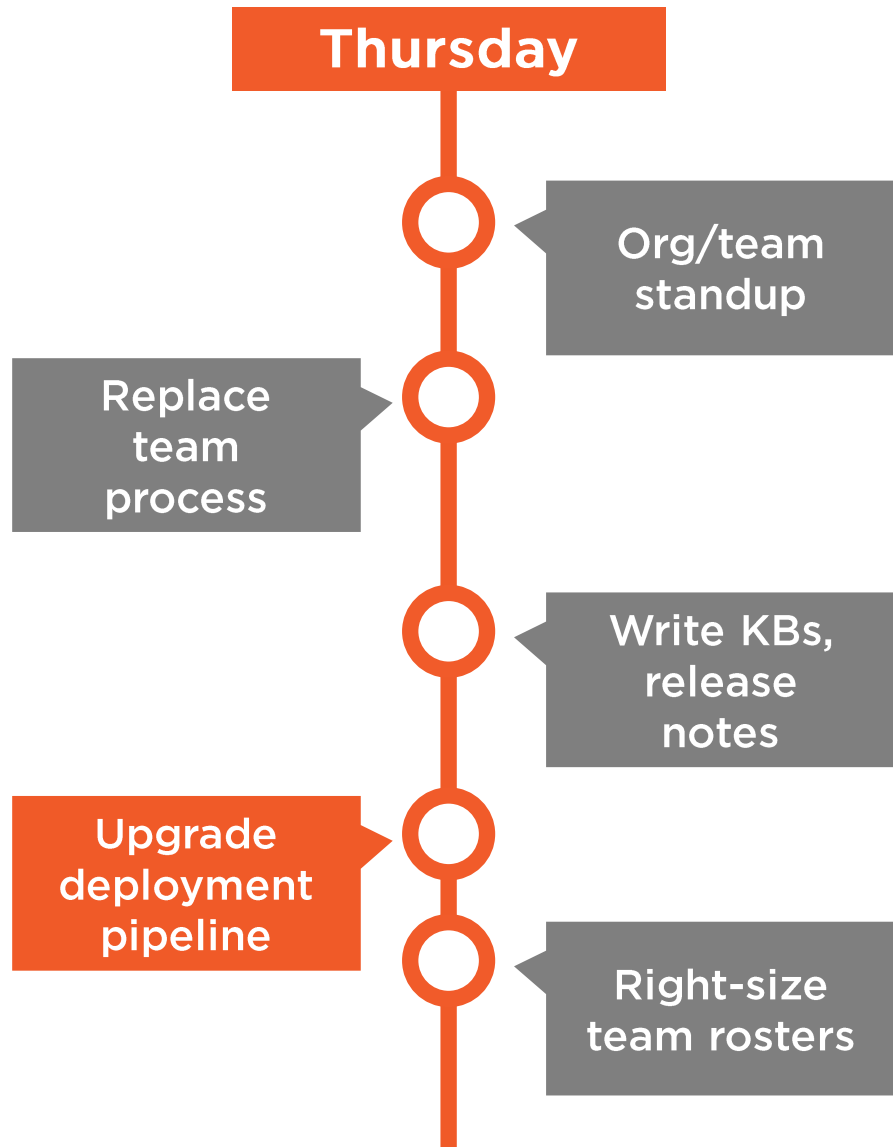

Set up an open content system

Still have “owners” but many contributors

Define a light review process – pull requests work well!

Open up to those outside the team

What is it?

Upgrade deployment pipeline

Who is involved?

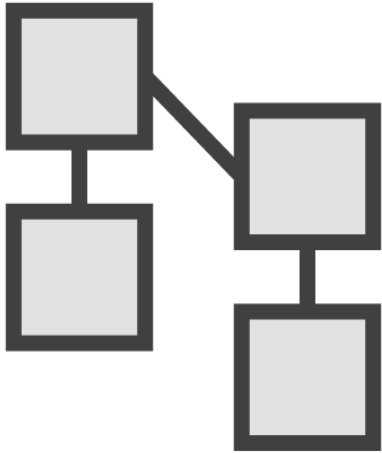

Application team

Why does it belong in DevOps?

Increased automation

Deployment Pipelines Grow Into a System of Record

Build a better audit trail over time

First CI/CD attempt may be lightweight

Partner with groups like InfoSec and Compliance

Cross-functional skills come in handy

Tips for Getting Started

Do value stream mapping with cross-functional team

Test changes repeatedly in non-prod environments

Use or create APIs to integration with existing audit-visible systems

Thursday

Org/team
standup

Replace
team
process

Write KBs,
release
notes

Upgrade
deployment
pipeline

Right-size
team rosters

What is it?

Right-size team rosters

Who is involved?

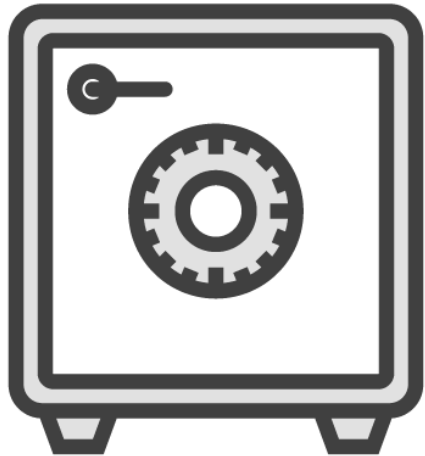

Executives and team leaders

Why does it belong in DevOps?

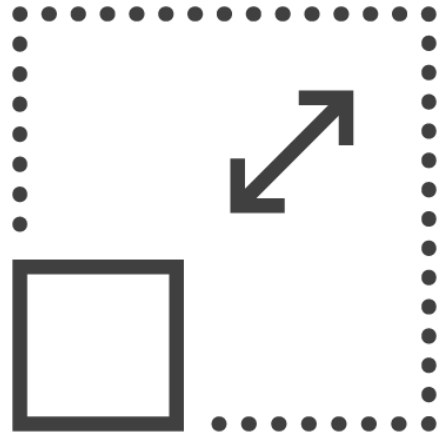

Responsiveness

Fluid Teams Support Adaptable Strategies

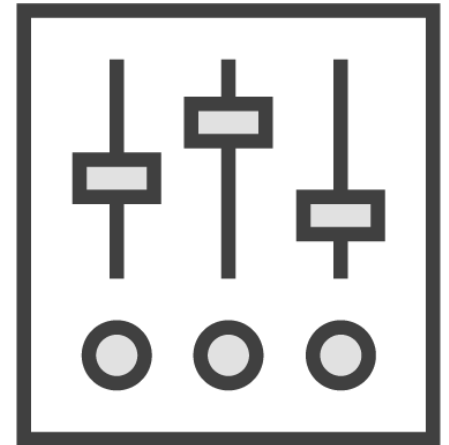

Application teams aren't of fixed size

Engineer count may swell during key periods, contract after

Rotate operations, security expertise throughout

Offers maximum flexibility to respond to changing business

Tips for Getting Started

Create culture of rotating opportunities

Use data to make decisions

Avoid over-adjusting

Define tech standards that reduce transition time for engineers
