

Week of DevOps – Fridays

Richard Seroter

SENIOR DIRECTOR OF PRODUCT, PIVOTAL

@rseroter

Overview

Package code for software release

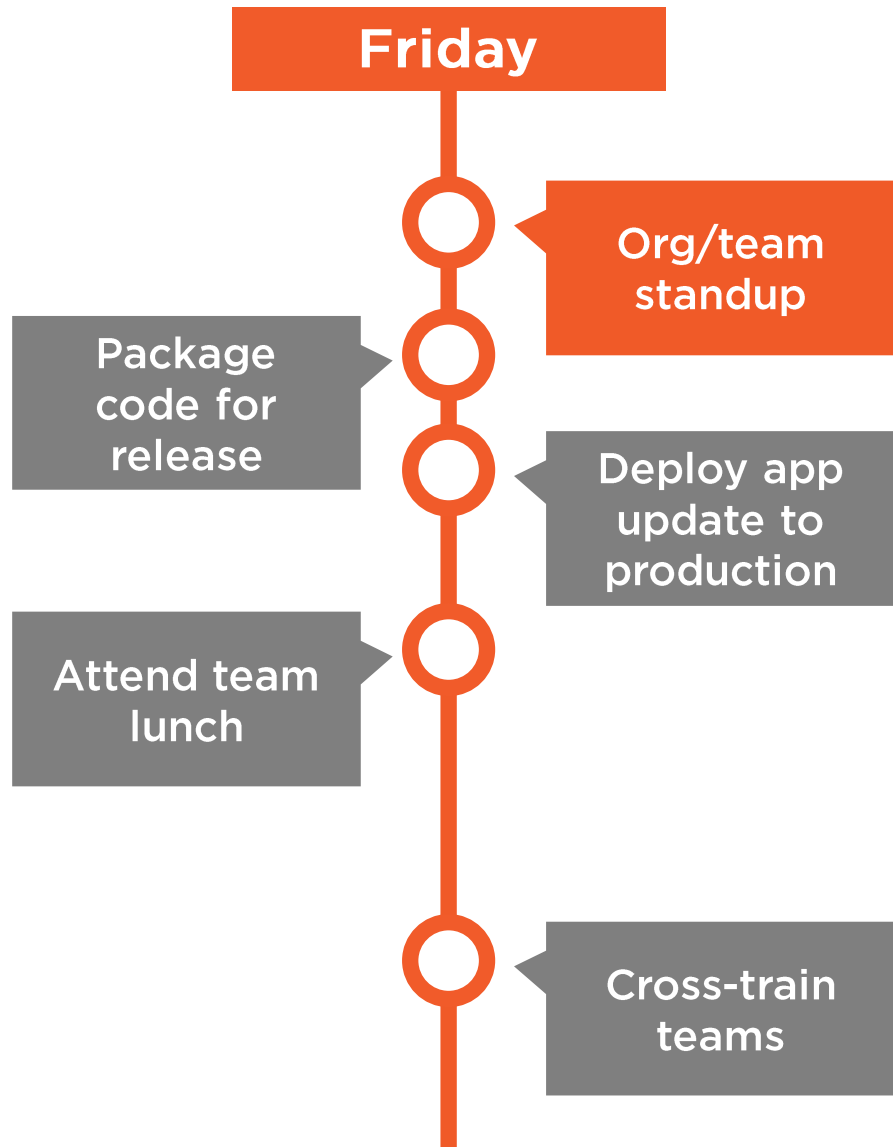

Deploy the application to production

Attend team function

Cross-train teams

Summary

What is it?

Org/team standup

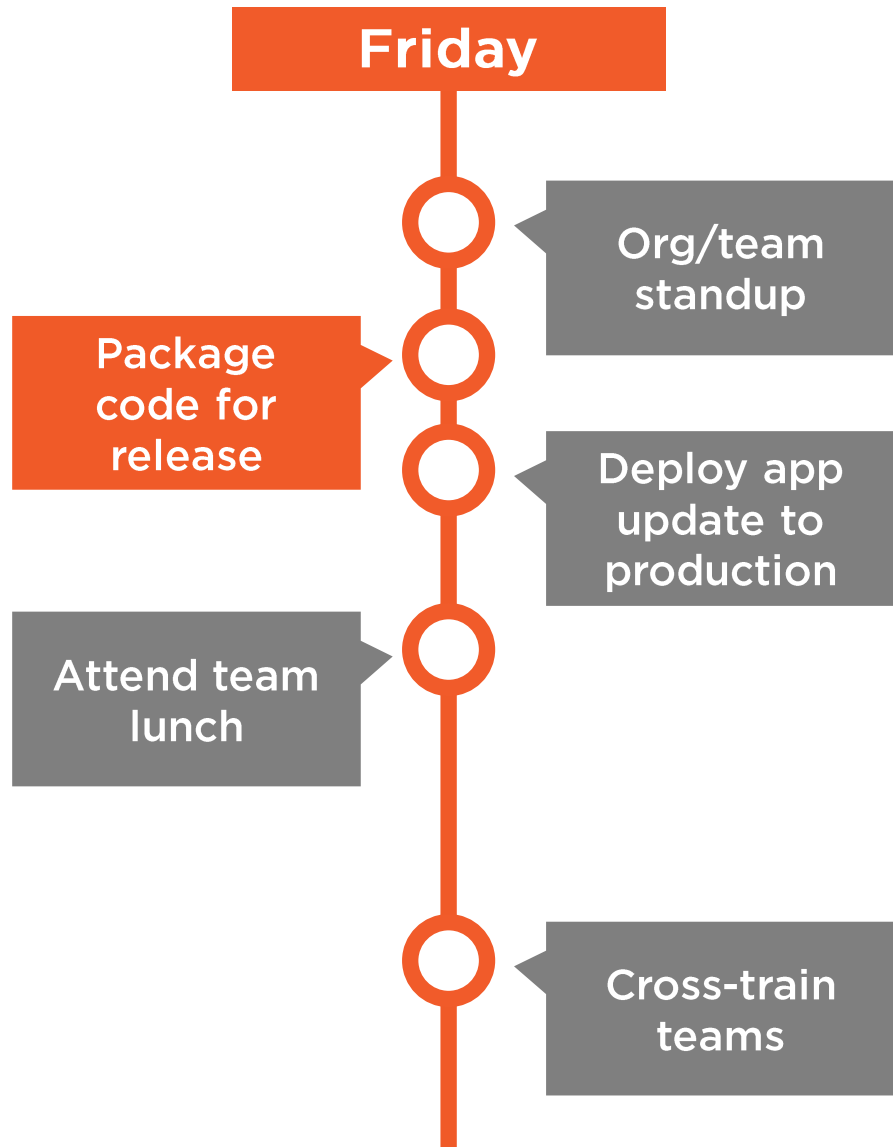

Who is involved?

Team members, interested parties

Why does it belong in DevOps?

Transparency, throughput, delivery focus

What is it?

Package code for release

Who is involved?

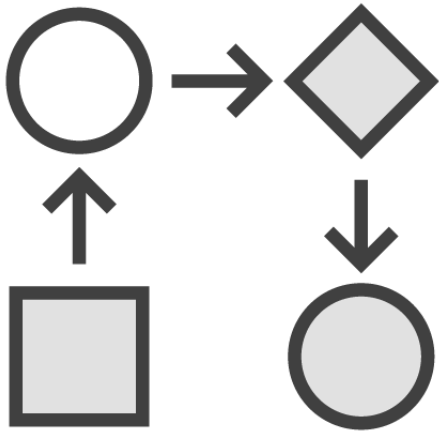

CI process, on-call engineer

Why does it belong in DevOps?

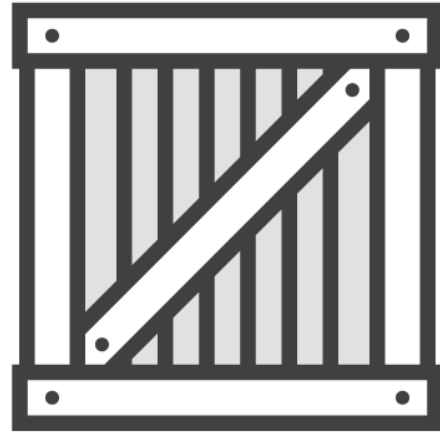

Fast flow

Packaging Must Be Repeatable, Comprehensive

Package is the
result of a
successful CI
pipeline

Multiple ways to
package an
application

Packages should
include ALL
pieces needed
to deploy

Ensure that
packages can be
recreated

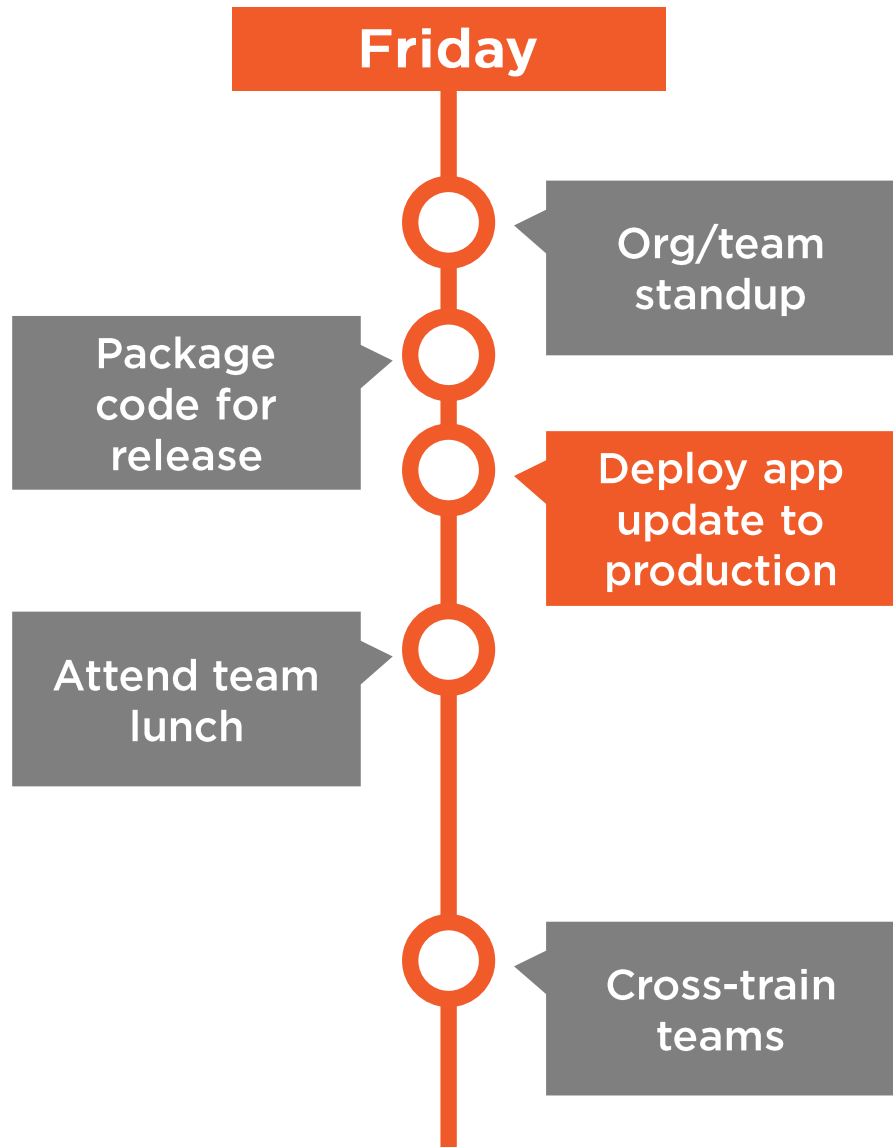

Tips for Getting Started

Document current process to find non-automated steps

Consider investing in package repository

Only use containers as output of CI

What is it?

Deploy app update to production

Who is involved?

Deployment pipeline, on-call engineer

Why does it belong in DevOps?

Last part of delivery pipeline!

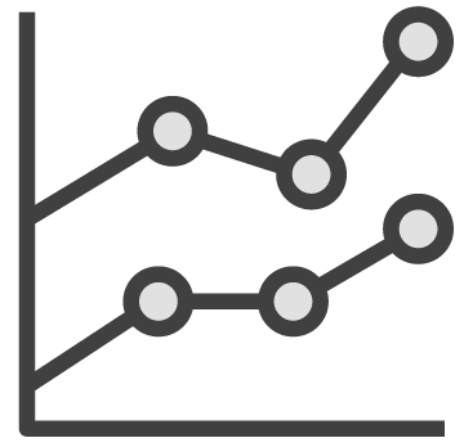

Ship Often for Better Outcomes

Should be so heavily practiced that it becomes boring

Multiple techniques available to minimize downtime

Have telemetry in place to measure impact (positive or negative) of release

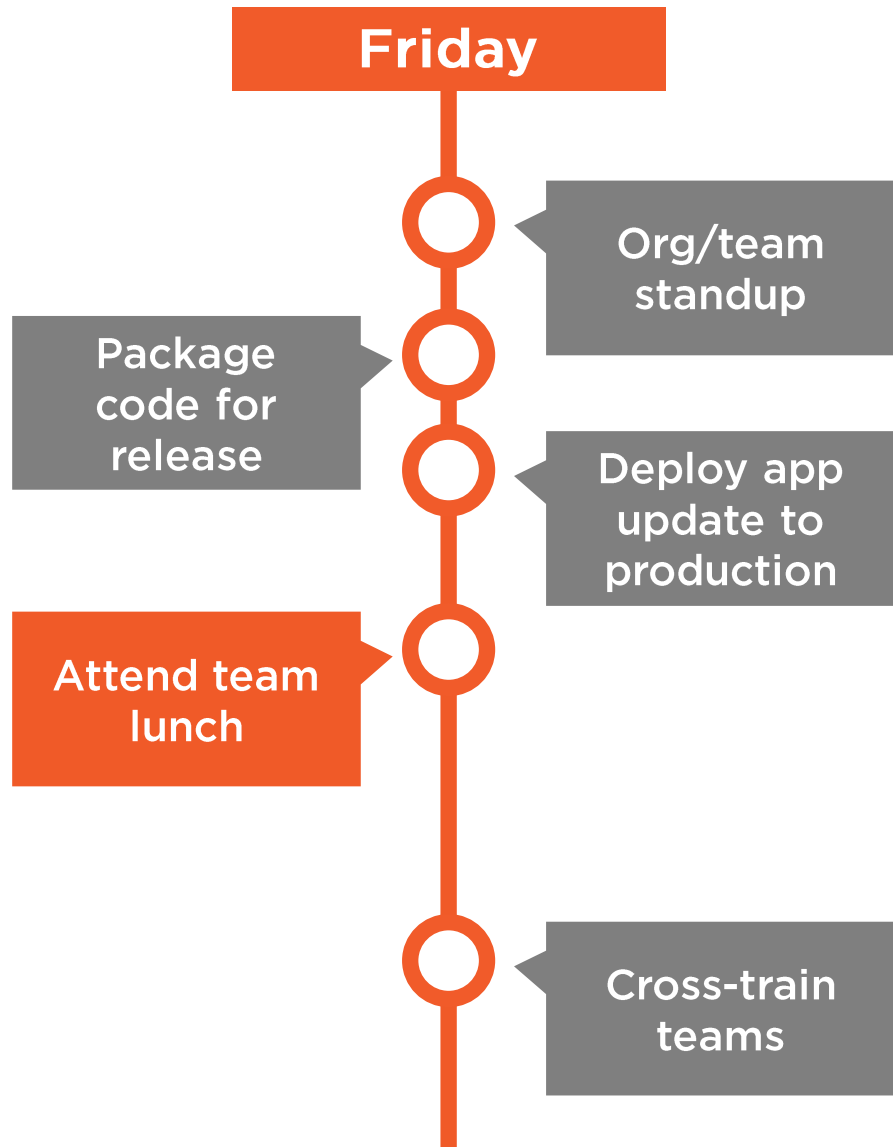

Tips for Getting Started

Try automated deployments with individual services before moving to entire systems

Blue/green deployment may be easiest way to start

Closely watch system *and* business metrics after deployment

What is it?

Attend team lunch

Who is involved?

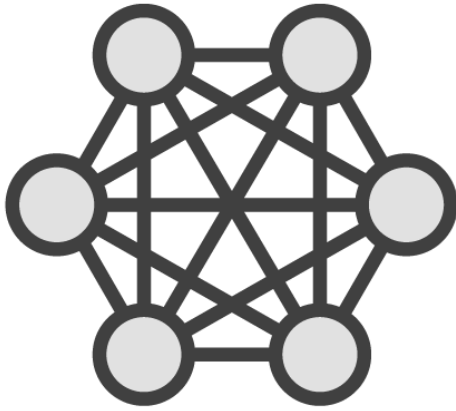

Everyone!

Why does it belong in DevOps?

Team-building, sense of unity

Trust Is a Foundation of DevOps

Build relationships
within and across
teams

These connections are
important in a crisis or
during retrospective

Meetups should be
planned by team, and
executives

Tips for Getting Started

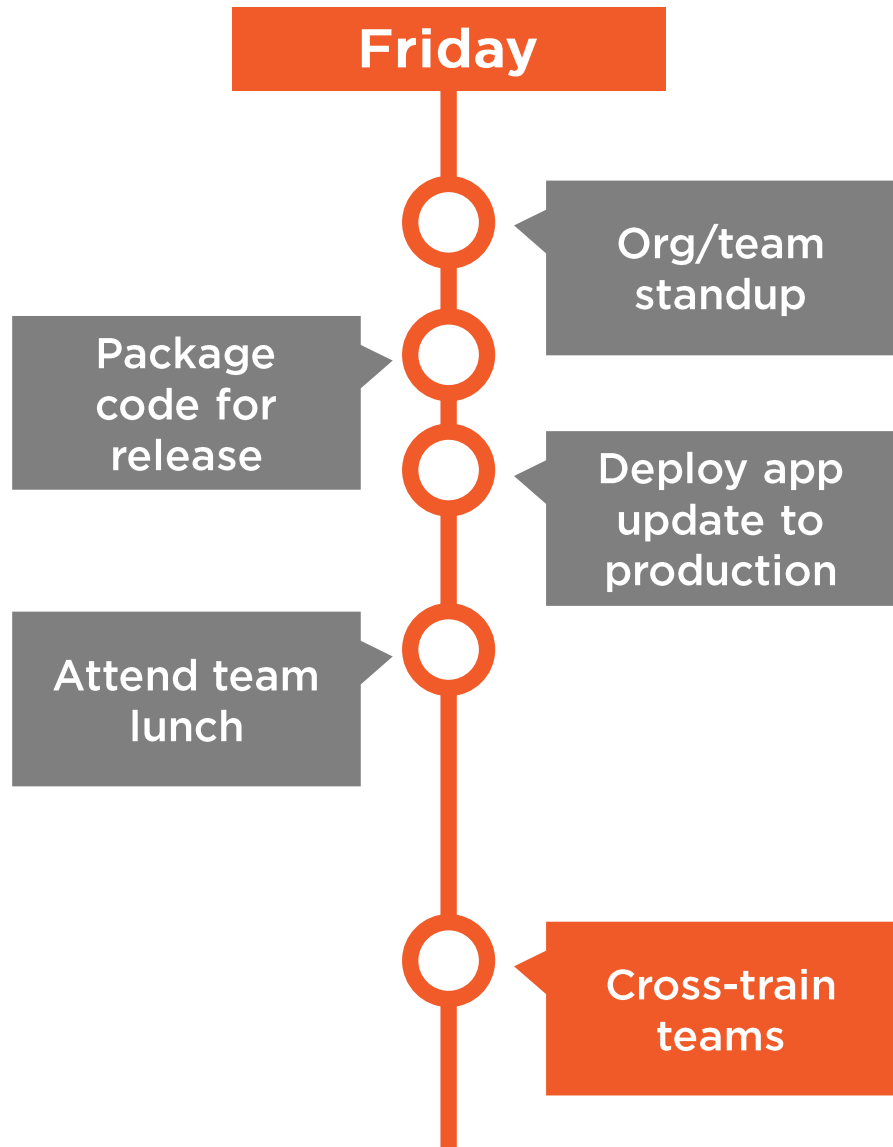

Buy lunch once a week for the team(s)

For meetings, use video conferencing

Don't force group socialization, but also encourage 1:1 opportunities

What is it?

Cross-train teams

Who is involved?

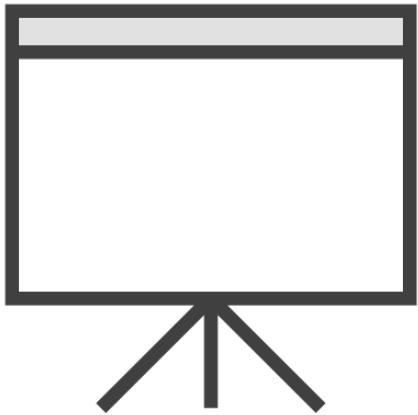

Anyone in the organization

Why does it belong in DevOps?

Continual learning, transparency

Share Local Learnings More Broadly

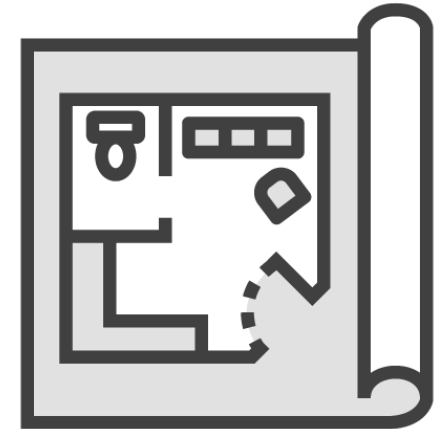

**“Show and tell”
to train, educate**

**Particularly useful
for front-line
support engineers**

**Sparks ideas
within other
teams**

**Share results of
experiments with
new technology**

Tips for Getting Started

Ask teams to demo after they ship

Invite broad audience outside application teams

Record for playback and archive

Summary

Overview

Package code for software release

Deploy the application to production

Attend team function

Cross-train teams

Characteristics of a DevOps Environment

Optimized for throughput

Clear view of entire deployment pipeline

Customer-centric definition of “done”

Small, frequent software releases

Defined feedback loops

Automation-centric

Focused on outcomes, not activities
