

AGILE PASSPORT

Match the Principle Task.

Draw lines to connect the AgilePM Icon to the correct Principle.

Communicate continuously and clearly .

. Develop iteratively

Demonstrate control .

. Collaborate

Never compromise quality .

. Deliver on time

Focus on the business need .

. Build incrementally from firm foundations

**and if you have got it right, you should see a geometric
shape balanced on the top of Tower Bridge.
Now that's Agile.**

AGILE PASSPORT

Atern's eight principles are:

Focus on the business need

Deliver on time

Collaborate

Never compromise quality

Build incrementally from firm foundations

Develop iteratively

Communicate continuously and clearly

Demonstrate control

The eight principles help direct and shape the attitude and mind set of an Atern team.

Focus on the business need

All decisions should be viewed in the light of delivering what the business needs to deliver when it needs to be delivered. The business roles and business products and Timeboxing and MoSCoW prioritisation enable Atern to fulfill this principle.

Deliver on time

Late delivery can undermine the reasons for the project especially where market opportunities or legal deadlines are involved. Timeboxing and MoSCoW prioritisation enable this principle and help build a reputation for timely and predictable deliveries.

Collaborate

Collaboration encourages increased understanding, greater speed and shared ownership. The right mix of business and technical roles encourages a high degree of collaboration between team members. The use of Facilitated Workshops encourages collaboration.

Never compromise quality

The level of quality should be agreed at the start and all work should be focused on achieving that level of quality. Everything is tested as soon as possible and test drive techniques result in a test being written before the deliverable is produced. MoSCoW Prioritisation and Timeboxing are used to ensure testing is appropriate and undertaken without introducing unnecessary risks.

Build incrementally from firm foundations

Incremental delivery enables the project to deliver real benefit to the business as early as possible. A series of releases are referred to as "increments", with each increment providing more functionality to the business. After the first increment, a core product is delivered, which can already be used by the customer. The Atern lifecycle delivers this principle which establishes a sound base of knowledge up front during Feasibility and Foundations phases before developing incrementally during later phases.

Develop iteratively

Atern uses iterative development to converge on the right solution. It is very rare that anything is built perfectly first time. Iterative development is about developing through repeated cycles often adding more functionality to the product. Multiple iterations repeat or return to create a fully integrated product. Change is actively encouraged and Atern uses iteration and constant review to make sure that what is being developed is what the business needs.

Communicate continuously and clearly

Atern techniques are designed to improve communication and effectiveness for both teams and individuals. Human interaction is valued through:

- Daily Stand-ups
- Facilitated Workshops
- Clearly defined roles and user involvement
- Modelling and Prototyping

Demonstrate Control

Atern teams need to be pro-active when monitoring and controlling progress in-line with Foundation Phase products. Management Foundations and Timebox plans along with well-defined timeboxes with constant review points assist the Project Manager and Development teams to follow this principle.
